# What is Amazon AppFlow?

1. 🛠️ Fully-managed integration service
🔒 Secure data exchange
🔗 Connects SaaS apps and AWS services

2. 🔄 Data flow examples	
👤 Salesforce contacts	📊 Ingested to Amazon Redshift
🎫 Zendesk support tickets	📦 Pulled to Amazon S3 bucket

# Overview

## Amazon AppFlow Setup Process

1. Choose objects

2. Specify mappings

3. Set up filters

**Connect your source and destination**

**Map source fields to destination**

**Add filters and validation**

**Activate or run flow**

1. 🖱️ Connect source and destination

📦 Choose transfer object

🕒 Specify transfer timing

📍 Define transfer location

2. 🌐 Map source fields to destination

🔍 Select source fields

🔄 Define field mapping

🔧 Specify data transformation

3. 🎯 Add filters and validation

🚫 Apply data filters

✅ Validate records

4. 🚀 Activate or run flow

✳️ Ready to go

▶️ Activate flow

# Example Use Cases for Amazon AppFlow

**1.**  **Transfer Salesforce opportunities to Amazon Redshift tables**  – Create a flow triggered on each new record created in Salesforce Cloud that calculates the sales potential and then transfers the modified record to an Amazon Redshift table.

**2.**  **Analyze Slack conversations**  – Create a flow triggered on a schedule that transfers conversation data from a Slack channel to Amazon Redshift, Snowflake, or Amazon S3 for storage and analysis.

**3.**  **Transfer support tickets from Zendesk for storage and analysis**  – Create a manually triggered flow for all tickets with a common case number in Zendesk that transfers ticket data to Amazon Redshift, Snowflake, or Amazon S3 for storage and analysis.

**4.**  **Transfer aggregate data weekly to S3 at 100GB per flow**  – Create a flow triggered on a weekly schedule to transfer Salesforce, Marketo, ServiceNow, and Zendesk data to Amazon S3 in aggregate up to 100GB per flow with low latency.

# Supported Source and Destination Applications

---

## Application List

**1**. Adobe Analytics, **2**. AfterShip, **3**. Amazon Connect, **4**. Amazon EventBridge, **5**. Amazon Lookout for Metrics, **6**. Amazon RDS for PostgreSQL, **7**. Amazon Redshift, **8**. Amazon S3, **9**. Amplitude, **10**. Asana

## Business and Productivity Tools

**1**. BambooHR, **2**. Blackbaud Raiser's Edge NXT, **3**. Braintree, **4**. CircleCI, **5**. Coupa

## Monitoring and Analytics

**1**. Datadog, **2**. Delighted, **3**. DocuSign Monitor, **4**. Domo, **5**. Dynatrace

## Advertising and Marketing

**1**. Facebook Ads, **2**. Facebook Page Insights, **3**. Freshdesk, **4**. Freshsales, **5**. GitHub

## Development and Collaboration

①. GitLab, ②. Google Ads, ③. Google Analytics, ④. Google Analytics 4, ⑤. Google BigQuery

## Productivity and Communication

①. Google Calendar, ②. Google Search Console, ③. Google Sheets, ④. HubSpot, ⑤. Infor Nexus

## Social Media and Customer Engagement

①. Instagram Ads, ②. Intercom, ③. JDBC, ④. Jira Cloud, ⑤. Kustomer

## Professional Networks and Email Marketing

①. LinkedIn Ads, ②. LinkedIn Pages, ③. Mailchimp, ④. Marketo, ⑤. Microsoft Dynamics 365

## Document Management and Team Collaboration

**1**. Microsoft SharePoint Online, **2**. Microsoft Teams, **3**. Mixpanel, **4**. Okta, **5**. Oracle HCM

## Payment Processing and Customer Management

**1**. PayPal, **2**. Pendo, **3**. Pipedrive, **4**. Productboard, **5**. QuickBooks Online

## Subscription Management and CRM

**1**. Recharge, **2**. Salesforce, **3**. Salesforce Marketing Cloud, **4**. Salesforce Pardot, **5**. SAP OData

## Email Services and IT Management

**1**. SendGrid, **2**. ServiceNow, **3**. Singular, **4**. Slack, **5**. Smartsheet

## Data Analytics and E-commerce

①. Snapchat Ads, ②. Snowflake, ③. Stripe, ④. Trend Micro, ⑤. Typeform

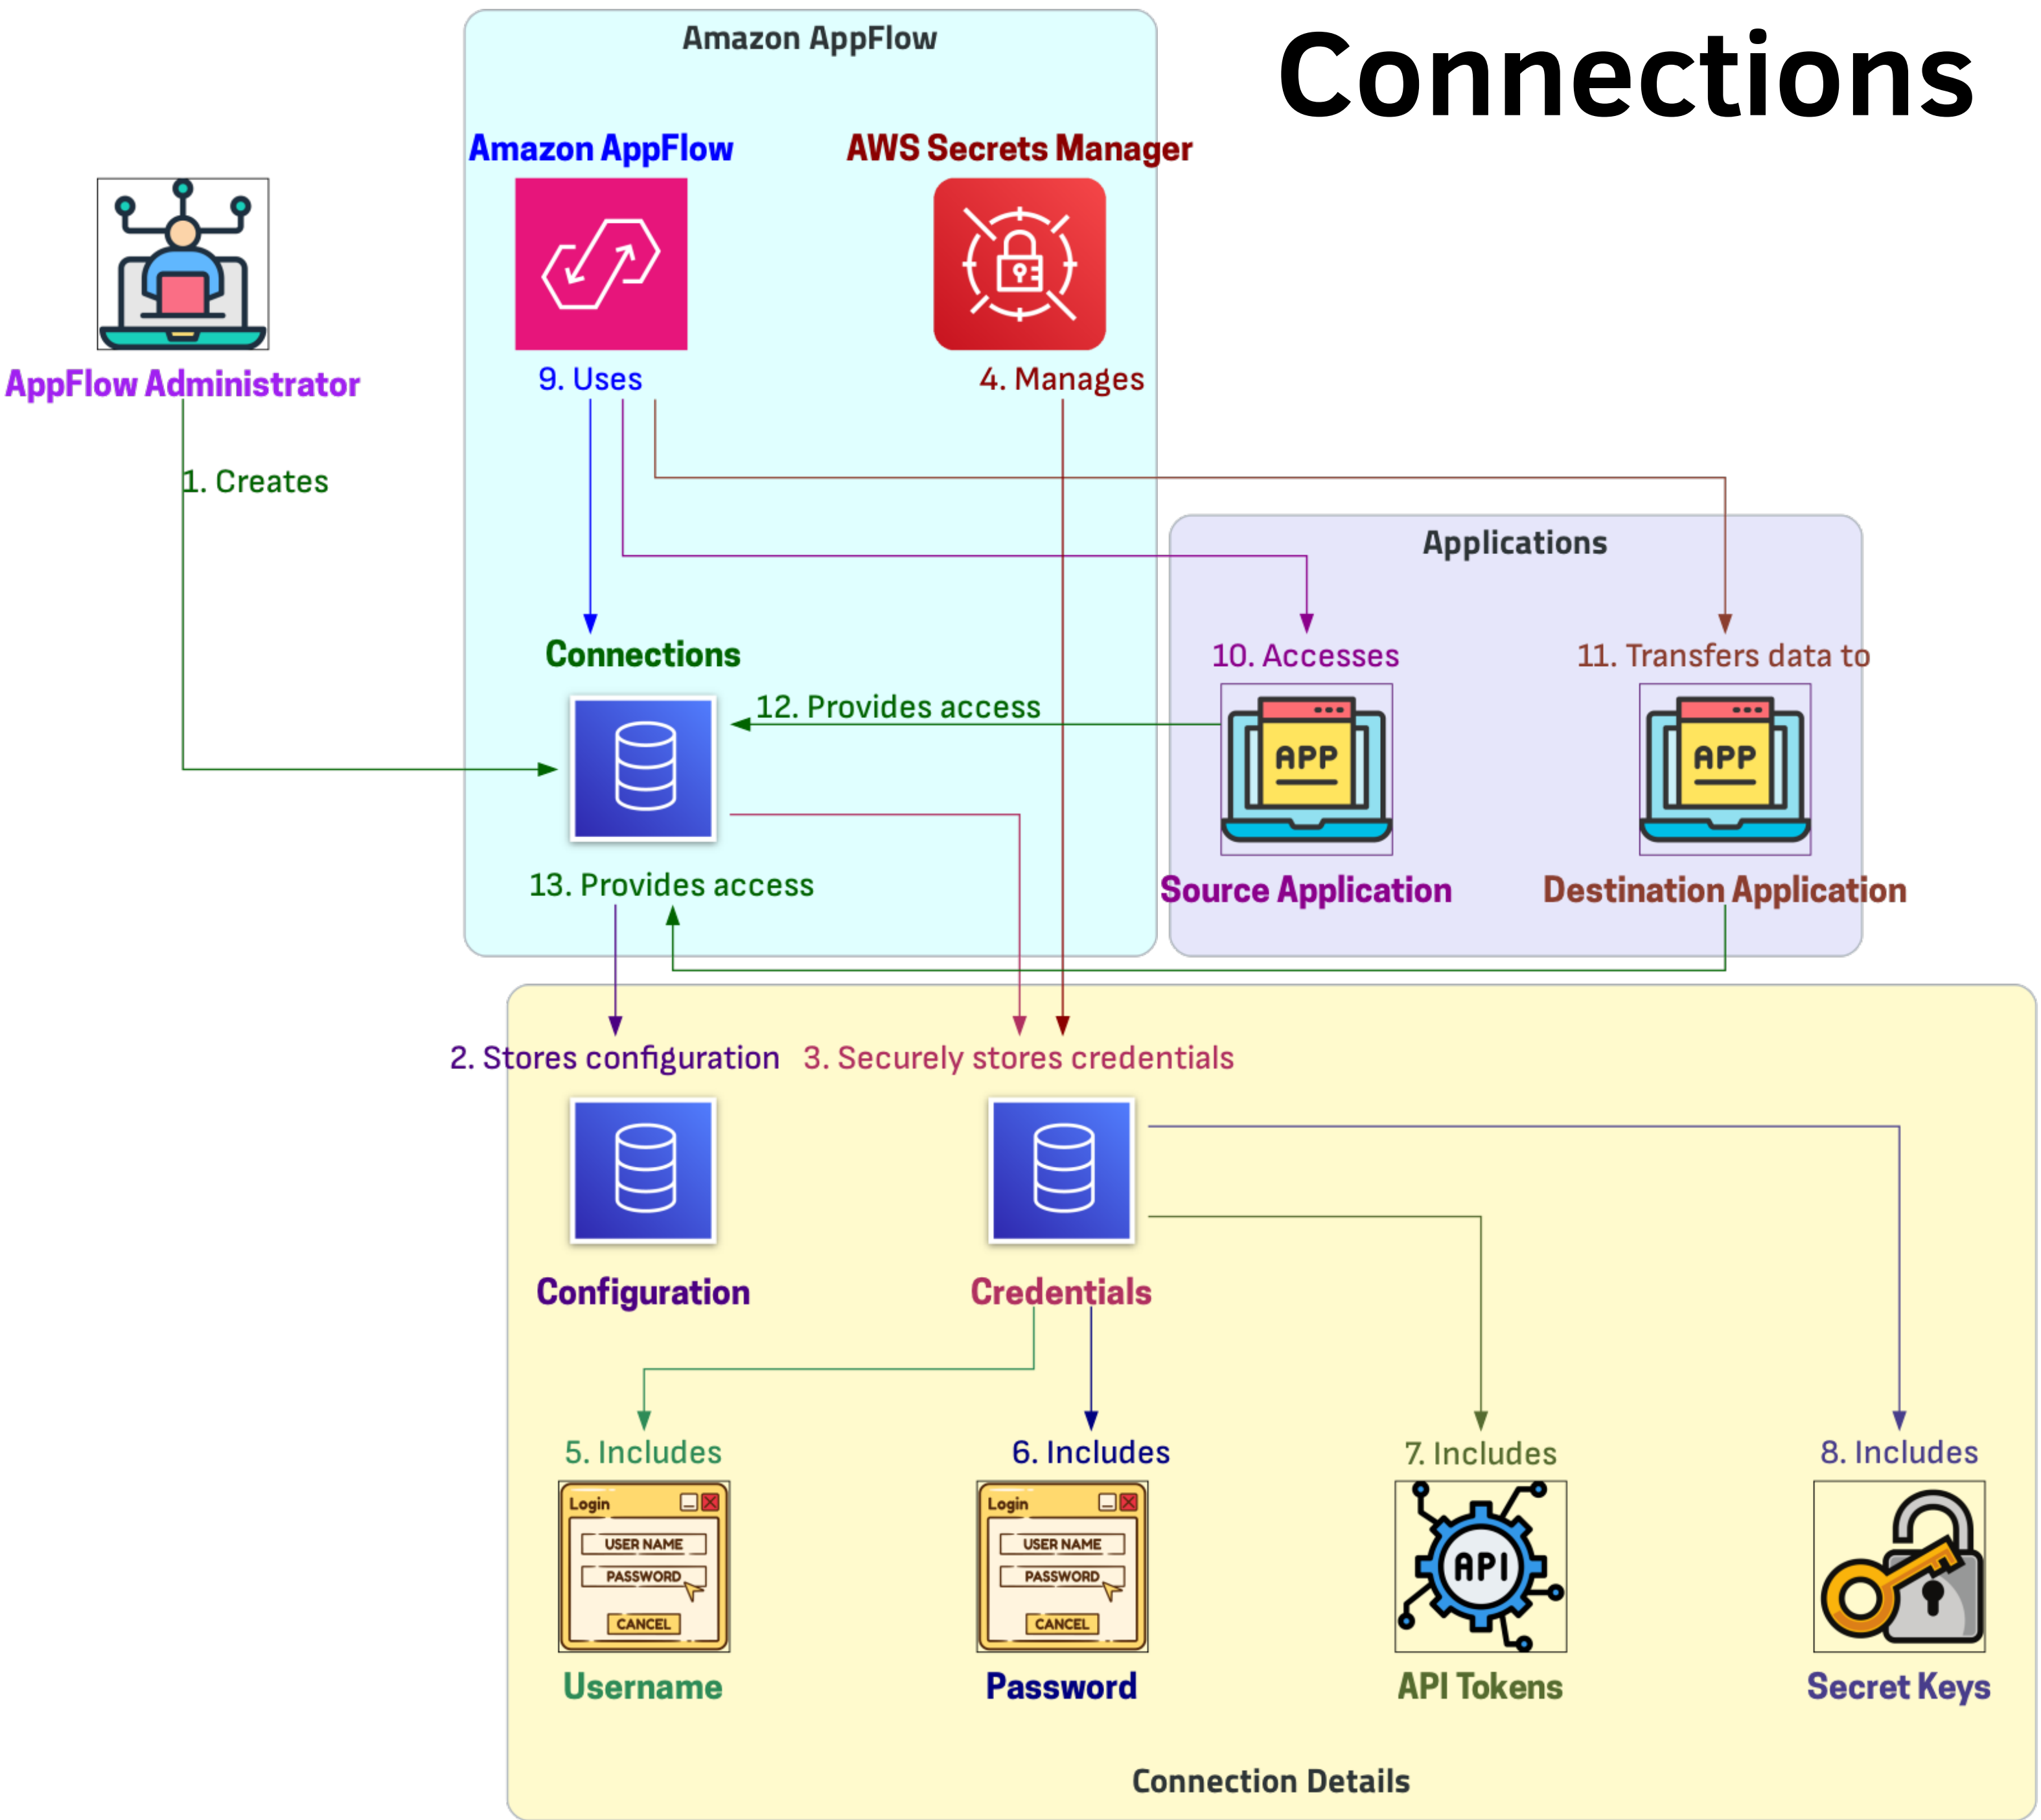

## Data Processing and Industry-Specific Tools

①. Upsolver, ②. Veeva, ③. WooCommerce, ④. Zendesk, ⑤. Zendesk Chat

## Customer Support and Video Conferencing

①. Zendesk Sell, ②. Zendesk Sunshine, ③. Zoho CRM, ④. Zoom

# Connections

## 1. 🔑 Enable data flows

🔗 Create connections to source and destination apps

🔒 Provide access to applications

## 2. 📁 Connection storage

### ⚙️ Configuration details

🔒 Credentials	👤 User names
	🔑 Passwords
	🔒 Secret keys
	🔑 API access tokens

## 3. 🔄 Connection reusability

NEW Assign to new flows

🔄 Assign to existing flows

✍️ No manual re-entry of details
