

Addons

Addons are **cluster features** and functionality **not yet available** in Kubernetes, therefore implemented through **3rd-party** pods and services.

- **DNS** - cluster DNS is a DNS server required to assign DNS records to Kubernetes objects and resources.
- **Dashboard** - a general purposed web-based user interface for cluster management.
- **Monitoring** - collects cluster-level container metrics and saves them to a central data store.
- **Logging** - collects cluster-level container logs and saves them to a central log store for analysis.
