Recreate Update Deployment

This is a basic deployment pattern which simply **shuts down all the old pods** and **replaces** them **with new ones**

In this strategy, the Deployment selects all **outdated Pods** and **deactivates** them at once. Once all old Pods are **deactivated**, the Deployment **creates updated Pods** for the **entire system**.

The **recreate strategy** is used for systems that **cannot function** in a **partially updated state** or if you would rather have **downtime than provide** users a lesser experience.
